

THE ULTIMATE CROSSOVER FOIL KITE FOR WATER AND SNOW

“Developing the Hyperlink is always exciting. Thanks to the multi-purpose design brief it takes us from riding twin tips and foils on water, to the highest peaks in the mountains on snow... and anywhere in between.

“We found the V3 could fatigue your arms on long days in the mountains, so we worked on reducing the bar pressure and steering forces while also increasing the turning speed.

“The V4 is now more fun on snow as it nicely accelerates through the loops, is extremely stable while offering great depower. Oh, and it glides pretty well too! On water, the increased handling makes it more fun and easier to send for big jumps.”
